PROFESSIONAL SUMMARY

Software Engineering graduate with hands-on production experience in full-stack web and mobile application development. Proficient in HTML, CSS, JavaScript, and familiar with React for front-end development and Python for scripting and backend logic. Experienced in building and deploying real-world applications — from responsive web interfaces and REST APIs through to database design and cloud-based systems. Comfortable working across the full stack and adapting quickly to new frameworks and tools. Seeking a Software Engineer role to contribute to innovative, user-focused products within a collaborative team.

WORK EXPERIENCE

Flutter Developer Intern | Nova-Script Pvt Ltd

6-Month Internship

- Contributed to "Book Now" — a large-scale tourism and hostel booking platform for the Sri Lankan and Asia-Pacific market; built responsive UI components, multi-step flows, and REST API integrations
- Worked on front-end interfaces using HTML, CSS, and JavaScript alongside mobile development — ensuring consistent, responsive design across platforms
- Contributed full-stack to "OneAccess Tech" — a corporate website and LMS built with PHP and MySQL; designed normalised relational database schema (15+ tables), CRUD systems, REST API endpoints, and admin dashboard
- Implemented SMTP email workflows, session-based authentication, and access control
- Used Git throughout — branching, pull requests, code review, and conflict resolution in a collaborative agile-like team
- Participated in debugging, testing, and performance optimisation across both mobile and web platforms

KEY PROJECTS

OneAccess Tech — Corporate Website & LMS Platform | PHP · MySQL · HTML · CSS · JavaScript · Bootstrap · PHPMailer · AdminLTE | live: old.oneaccess.lk

- Built a full corporate website with dynamic content management — responsive HTML/CSS layouts, JavaScript interactions, and SEO-friendly routing
- Architected a complete Learning Management System: course management, student enrollment, lesson viewer (video + files), student portal, and admin dashboard
- Designed normalised relational database schema (15+ tables) with authentication, access control, and session management
- Integrated SMTP email notifications via PHPMailer; built dynamic blog with search, pagination, and SEO-friendly URLs

V2 Soft POS — General-Purpose Point of Sale System | Laravel · PHP · MySQL · JavaScript · Bootstrap · HTML · CSS

- Built a full-featured POS system for local shopkeepers — product management, sales, invoicing, inventory tracking, and profit reporting
- Designed a toggleable feature system via shop settings — repair management and buyback (used-item purchasing) can be enabled or disabled, making the app usable across different business types beyond phone shops

- Implemented a smart buyback/used-item flow: purchased used items are stored as products with an `is_used_item` flag and an inventory row, reusing the existing sale, refund, and profit-snapshot logic rather than maintaining a separate stock table
- Architected for fully offline/local operation with no internet dependency — designed to work reliably in environments with no WiFi or connectivity
- Delivered client-facing pricing tiers and phased the build iteratively — gathering real feedback, edge cases, and bug reports to refine each feature before moving to the next

A&R Baby Collection — E-Commerce CMS Platform | PHP · MySQL · HTML · CSS · Bootstrap 5 · JavaScript · Google Drive API | live: anrbaby.lk

- Built a fully responsive customer-facing product showcase using HTML, CSS (Bootstrap 5), and JavaScript — including animated homepage carousel and scroll effects
- Developed a complete admin CMS with product management, variant handling (JSON), multi-image upload, and Google Drive API cloud media storage
- Implemented secure PDO-based database interactions and admin authentication with route protection

Xplorit — Vehicle Rental Marketplace | Flutter · Firebase · GetX · Google Maps API | 3rd Place — NTU Final Year Project Display (2024)

- Full-stack dual-role marketplace (renter & lender) — real-time bookings, location-based discovery, in-app chat, OTP authentication
- Clean architecture: Repository → Controller → UI with GetX; atomic Firestore operations for booking lifecycle; Google Maps with live route polylines
- Designed full Firestore data schema and multi-image upload via Firebase Storage

Satisfy — Manufacturing ERP System | Flutter · Firebase Firestore & Storage · `fl_chart`

- Full-stack mobile ERP for a furniture business — inventory, Bill of Materials (BOM), production costing, and invoicing
- Transaction-safe billing using atomic operations; cascading cost engine, PDF report generation, and sales analytics dashboard

Book Now — Hostel & Activity Booking Platform | Flutter · Dart · Node.js · MongoDB · REST API

- Primary developer on a large-scale tourism booking platform; built booking flows, reusable UI components, state management, and REST API integrations
- Contributed backend updates to Node.js controllers and data models demonstrating full-stack awareness

TECHNICAL SKILLS

Frontend: HTML5 · CSS3 · JavaScript · React (familiar) · Bootstrap 5 · Tailwind CSS · jQuery · Responsive Design · Swiper.js · AOS

Backend: PHP 8 · Laravel · MySQL/MariaDB · Eloquent ORM · Python (familiar) · RESTful API design · MVC · PDO · PHPMailer · AJAX · Node.js

Mobile: Flutter · Dart · Provider · GetX · Firebase (Auth, Firestore, Storage, FCM, App Check) · Google Maps API · REST API (HTTP/Dio)

Tools: Git & GitHub · Postman · VS Code · Android Studio · Firebase Console · cPanel · GitHub Pages · Google Drive API

Architecture: MVVM · MVC · Repository Pattern · Clean Architecture · Modular Design

Practices: Agile/Collaborative Workflows · Version Control (branching, PRs) · API Testing · Debugging & Optimisation

EDUCATION

BSc. in Software Engineering

2020 – 2024

National Textile University, Faisalabad, Pakistan · 3rd Place — Final Year Project Display, Dept. of Computer Science
