PROFESSIONAL SUMMARY

Software Engineering graduate with hands-on production experience in cross-platform mobile application development (Flutter) and full-stack web development (Laravel/PHP). Proven ability to own entire feature lifecycles — from requirements analysis and UI architecture through API integration, backend logic, and deployment. Contributed to real-world team projects in an internship, delivering scalable, maintainable code. Seeking an Associate Software Developer role to drive impact through clean architecture, strong engineering fundamentals, and a problem-solving mindset.

WORK EXPERIENCE

Flutter Developer Intern | Nova-Script Pvt Ltd

6-Month Internship

- Led Flutter mobile development for "Book Now" — a large-scale tourism and hostel booking platform for the Sri Lankan and Asia-Pacific market
- Architected and implemented reusable, responsive UI components and complex booking flows (multi-room, activity booking) using Provider state management
- Integrated REST APIs for real-time data communication between the Flutter client and Node.js/MongoDB backend services; gained working knowledge of MongoDB data structures and queries as part of the Book Now backend
- Contributed to full-stack development of "OneAccess Tech" — a corporate website and Learning Management System (LMS) built with PHP 8 and MySQL, including course management, student enrollment, lesson delivery, and admin dashboard
- Designed and implemented a normalized relational database schema (15+ tables), authentication systems, and SMTP email workflows using PHPMailer for the OneAccess platform
- Contributed to Laravel-based web application backends — building CRUD systems, REST API endpoints, controllers, and data models
- Practiced professional Git workflows: branching, pull requests, code review, and conflict resolution within a collaborative team environment
- Participated in debugging, testing, and performance optimization across both mobile and web platforms in an agile-like workflow

KEY PROJECTS

Book Now — Hostel & Activity Booking Platform | Flutter · Dart · Node.js · REST API · Provider

- Primary Flutter developer; built majority of mobile codebase including booking flows, UI systems, and API integration
- Designed scalable Flutter UI architecture with reusable components and responsive layouts across multiple device sizes
- Integrated real-time REST APIs, optimized widget performance, and managed application state across multiple modules
- Contributed backend fixes and controller updates in Node.js as needed — demonstrating full-stack awareness

Xplorit — Vehicle Rental Marketplace (Flutter + Firebase) | [3rd Place — Final Year Project Display, NTU](#)

Tech: Flutter · Firebase (Auth, Firestore, Storage, FCM, App Check) · GetX · Google Maps API

- Full-stack dual-role marketplace (renter & lender) with real-time bookings, location-based discovery, and in-app chat
- Architected complete booking lifecycle system with atomic Firestore operations, OTP authentication, and booking analytics
- Built real-time chat using Firestore, live location tracking, and Google Maps with route polylines (Geolocator/Geocoding)
- Implemented Repository → Controller → UI clean architecture pattern using GetX for scalable state management
- Designed full Firestore data schema, multi-image upload via Firebase Storage, and flexible pricing logic (hourly/daily/weekly)

Satisfy — Manufacturing & Inventory Management System | Flutter · Firebase Firestore & Storage · fl_chart

- Full-stack mobile ERP for a furniture business — digitizing inventory, Bill of Materials (BOM), production costing, and invoicing
- Built transaction-safe billing system using Firestore atomic operations ensuring consistent stock and invoice updates
- Designed cascading price calculation engine: material price changes automatically propagate to finished product costs
- Developed PDF report generation, sales analytics dashboard, top-product metrics, and material usage tracking

OneAccess Tech — Corporate Website & LMS Platform | PHP 8 · MySQL · Bootstrap · AdminLTE · PHPMailer

- Architected a full Learning Management System (LMS) — courses, enrollments, lesson viewer (video + files), student portal
- Designed normalized relational database schema (15+ tables) with authentication, access control, and session management
- Built dynamic blog system with search, pagination, SEO-friendly routing, and SMTP email notifications via PHPMailer

A&R Baby Collection — E-Commerce CMS Platform (anrbaby.lk) | PHP · MySQL · Bootstrap 5 · Google Drive API · Firebase Admin SDK

- Built full product showcase and CMS with admin dashboard — product management, variant handling (JSON), image upload
- Integrated Google Drive API for cloud-based media storage; implemented secure PDO-based database interactions

TECHNICAL SKILLS

Mobile: Flutter · Dart · Provider · GetX · REST API (HTTP/Dio) · Firebase (Auth, Firestore, Storage, FCM, App Check) · Google Maps API · Geolocator · GetStorage · fl_chart · PDF generation

Backend: Laravel · PHP 8 · MySQL/MariaDB · Eloquent ORM · MongoDB (working knowledge) · RESTful API design · MVC · PDO · Authentication (Breeze) · PHPMailer · AJAX

Frontend: Tailwind CSS · Bootstrap 5 · JavaScript · jQuery · Swiper.js · AOS · Quill.js · Typed.js

Tools: Git & GitHub · Postman · Android Studio · VS Code · Firebase Console · cPanel · GitHub Pages · AdminLTE · Google Drive API

Architecture: MVVM · MVC · Repository Pattern · Clean Architecture · Modular Design · Scalable State Management

Practices: Agile/Collaborative Workflows · Version Control (branching, PRs, conflicts) · API Testing · Debugging & Optimization

EDUCATION

BSc. in Software Engineering

2020 – 2024

National Textile University, Faisalabad, Pakistan  **3rd Place — Final Year Project Display, Dept. of Computer Science**
